Coding Assessments
Python

Coding assessments are a part of the course to ensure that you are keeping up with the material. You will solve the assessments in the integrated development environment (IDE) of your choice (e.g., Google Colab).

Students will turn in weekly coding assignments each Friday by 11:59 PM. These assignments will be quick assignments that demonstrate your ability to complete the tasks covered in the material from that week. These assignments will be turned in through GitHub (see below for more information on GitHub). They are graded in a pass/fail fashion. Either the code produces the expected output or it does not. As long as you turn in the assessment on time, I will make comments directly on the code, and you can update the submission and resubmit as many times as it takes to get it correct.
